

Madawaska Land Port of Entry Replacement Environmental Impact Statement

Background

The existing U.S. General Services Administration's (GSA), Region 1, Madawaska Land Port of Entry (LPOE) was deficient in size, layout, and functionality. The LPOE's deficiencies prevented the Customs and Borders Protection and other federal agencies from adequately fulfilling their respective missions. The GSA proposed to replace the LPOE with a new facility that will improve the operational efficiency, safety, and security for federal agency personnel and cross-border travelers.

Scope

Gannett Fleming prepared an environmental impact statement (EIS) for the GSA that documented the planning and potential environmental impacts for replacing the LPOE. Four LPOE replacement alternatives were developed and considered in the EIS. The selected alternative consisted of demolishing the existing facilities and constructing a new, state-of-the-art LPOE on a 12.9 acre site, adjacent to the existing LPOE and the downtown central business district.

The primary environmental issues and concerns with the project were the potential impacts to the Saint John River; the interruption of rail freight service to Madawaska's major employer; the displacement of commercial businesses, the disruption to others, traffic, and aesthetics; and the ability to maintain security during construction.

Accomplishments

Our firm provided environmental planning and documentation services in accordance with the National Environmental Policy Act (NEPA), GSA's policies and procedures for implementing NEPA, and conceptual engineering services.

The Madawaska Land Port of Entry is near the central business district and within walking distance of retail establishments, restaurants, and office space.

Client

U.S. General Services Administration,
Region 1

Location

Madawaska, Maine, and Edmundston, New
Brunswick, Canada

Firm's Fee

\$144,355

Key Services

- Environmental planning and analyses
- Draft and final EIS preparation
- Public involvement and agency coordination
 - ◊ French- and sign-language interpreters provided at public meeting and hearing
- Conceptual design and cost estimation for relocation of portion of railroad
